

Power of Scheduling Algorithms for Task & Project Management

How is SCHEDULOGY different?

How is SCHEDULOGY different?

There is a plenty of calendar and meeting schedule apps out there.

What do they have in common?

They fail at the most important goal – to save your time.

For SCHEDULOGY, saving your time is **EVERYTHING**.

How does SCHEDULOGY save your time?

“What can be done by an algorithm, should be done by an algorithm.”

Find a common time slot for all meeting attendees

- Software knows everybody's calendar, why would you need to select times that suit you and then your colleagues would have to do the same to tediously agree on a time that will change twice anyway?

Reschedule your meetings based on external changes

- People get sick, priorities change, customers change their minds, family stuff happens, ... – are you seriously not sick & tired of reorganizing your calendar all the time?

Use Case #1 – Personal Task Management

No need to track items in your Calendar and the To-Do list separately.

SCHEDULOGY will schedule tasks into precisely at-the-time available free slots, so that deadlines are met, and no overtime is needed.

There is no need for the user to specify when exactly to reserve time to work on a task, if the task can be worked on anytime.

No need to react to changes (new tasks, prolonged meetings) either – SCHEDULOGY takes care of this automatically.

Use Case #2 – Handling Task Dependencies

Task Management in a large team is a very complex problem to solve due to inter-task dependencies between tasks performed by different people.

Such problems arise typically in manufacturing, shift scheduling, production planning, and powerful algorithms have been developed for exactly those purposes.

SCHEDULOGY leverages these algorithms, to improve teamwork and effectivity in natural environment where individual and dependent work steps are highly distributed among members of the team.

Use Case #3 – Meeting Time

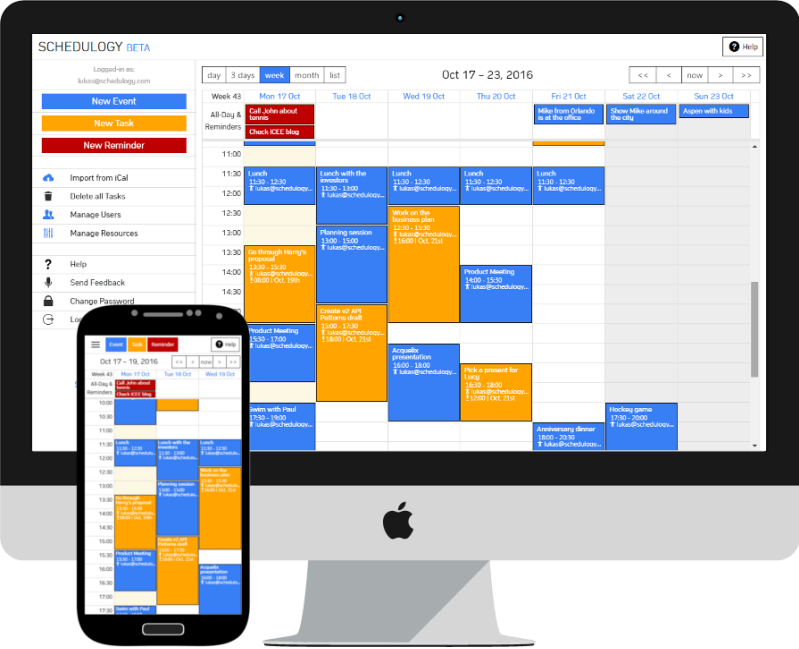

Corporate meetings where calendars of very busy people need to be coordinated and a common time slot found, are both very important, and very annoying to schedule and reschedule.

With SCHEDULOGY, all this is taken care of. The necessary input just follows common sense – how long the meeting should be, and until when it should happen – SCHEDULOGY schedules the meeting automatically.

No need for you to select 5 suitable times, which will likely not suit your colleague, or for you to go to your colleagues' calendars and think what they may or may not re-schedule.

“What can be done by an algorithm, should be done by an algorithm.”
